---

Making safety safer for you

BD Insyte™ Autoguard™ BC is proven to reduce the risk of blood exposure by 95%.

The healthcare industry has come a long way in preventing needlestick injuries and their potential dangers. Even so, blood exposure during a peripheral IV insertion is still a factor—and a risk—to healthcare workers and patients.

Now blood exposure doesn’t have to be “part of the job.” 98% of clinicians stated they had no risk of blood exposure during insertion when using BD Insyte™ Autoguard™ BC, which means:

- No risk of exposure to bloodborne pathogens.
- No clean up of blood spills.
- No need to worry about stopping blood.
- No add-on costs for clean-up supplies.

Safe And Clinically Proven

- New blood-control technology proven to reduce the risk of blood exposure by 95%.
- Push-button shielding technology proven to reduce needlestick injuries by 95%.
- BD Vialon™ Biomaterial—softens up to 70% in the vessel, resulting in longer dwell times. Reduces the chance of mechanical phlebitis by up to 50%.
- Greater first-stick success for difficult or compromised veins.

Safety Beyond Needlestick Protection

BD Insyte™ Autoguard™ BC IV catheters are a part of the BD Medical family of products—products that reflect a continuing commitment to keeping healthcare workers safer worldwide. To order or request more information, call 1-800.335.9653 or visit www.wolfmed.com.
